# Ley de Auditoría Forense y Anexo Normativo

Aprovisionamiento sistemático de «API» por parte de terceros, arquitectura de derivación automatizada e incumplimiento contractual en el ecosistema de «Valve» Steam
Dominio emisor **phishdestroy.io**
Plataforma de destino **Valve Steam / Steamworks**
Vector de autenticación principal **Steam OpenID 2.0 / Web API**
Dedicatoria legal **All Rights to Humanity (CC0)**

Sección I: Memorándum ejecutivo y conclusiones fácticas REF: MEMORÁNDUM-RESUMEN-01
El presente documento constituye un informe formal de auditoría forense en el que se analiza la interrelación operativa entre las condiciones comerciales publicadas por Valve Corporation, sus puntos finales de autenticación técnica y las plataformas comerciales de terceros observadas. La auditoría se llevó a cabo mediante la observación pasiva y sin autenticación de la red, la verificación de registros en RDAP y la telemetría pública de Link Filter.

**Núcleo factual:** La observación empírica pone de manifiesto una divergencia sistemática entre las declaraciones contractuales públicas de Valve y su infraestructura de producción. Aunque el Acuerdo de Suscriptor de Steam (SSA) prohíbe estrictamente la explotación comercial no autorizada (§ 2.G), la interacción automatizada mediante bots o scripts (§ 4.C) y la transferencia de cuentas (§ 1.C), Valve Corporation sigue proporcionando, en tiempo real, una infraestructura programática de autenticación OpenID y consulta de inventario a, al menos, 175 entidades comerciales que generan volúmenes de transacciones secundarias de miles de millones de dólares.

175
Operadores comerciales auditados
44
Servidores de autenticación con dominios independientes
26
Pares de proxies con filtrado dividido
100%
Artículos no aplicados de la SSA: § 2.G / § 4.C
0
Revocaciones de autenticación forzadas
Marco contractual y normativo aplicable
SSA, art.2.G

**Prohibición de uso comercial:** Queda expresamente prohibido utilizar los Contenidos y Servicios con fines comerciales sin la autorización previa por escrito de Valve Corporation.
SSA, art.4.C
**Restricción de automatización:** Queda terminantemente prohibido el uso de scripts, bots de negociación, macros o sistemas no controlados por personas que interactúen con los servicios y mercados de Steam.
SSA, art.1.C
**Obligación de uso personal:** Limita el uso de las cuentas al ámbito personal; prohíbe expresamente la venta, el alquiler, la cesión o el intercambio de cuentas de usuario de Steam.
La Ley de Seguridad de los Datos de la UE (DSA, 2022/2065)
**Evaluación del riesgo sistémico (art. 34/35):** Las plataformas en línea de gran envergadura (VLOP) deben detectar, evaluar y mitigar de forma activa los riesgos sistémicos derivados del uso indebido automatizado y la explotación comercial no autorizada.

Sección II: Libro mayor de anexos A — Pares divididos con filtro de enlaces documentados (rutas 26) REF: EX-SPLIT-LEDGER
**Análisis forense de la evasión mediante dominios divididos:** En el marco del sistema de filtrado de enlaces «Steam» de Valve (`steamcommunity.com/linkfilter/?url=...`), cuando un usuario final hace clic en un enlace que conduce a una plataforma de apuestas o del mercado negro señalada, Valve muestra una advertencia destacada (*«¡Enlace bloqueado! ... marcado como potencialmente malicioso»*). Sin embargo, el rastreo forense de rutas revela que existen 26 plataformas comerciales que operan en un **arquitectura de dominios separados**: aunque el dominio comercial principal aparece como BLOQUEADO en el filtro de enlaces, el dominio secundario que aloja el punto final de respuesta de OpenID de Valve aparece marcado como LIMPIO. Los servidores OpenID de Valve aceptan sin interrupción las solicitudes de autenticación procedentes de estos servidores proxy, lo que neutraliza la advertencia de seguridad para el usuario y permite seguir procesando los inicios de sesión.

* Nota: Se han realizado comprobaciones pasivas en los puntos finales no autenticados del filtro de enlaces «Steam» en 2026-09-19 y 2026-09-21.. Los cuerpos de las respuestas HTTP sin procesar y los resúmenes SHA-256 se conservan en el conjunto de datos del repositorio (steam_tos_assets/linkfilter-2026-09-22.json).

Sección III: Libro de registro de anexos B — Censo exhaustivo de las entidades comerciales auditadas de 175 REF: EX-175-, CENSO GENERAL

El siguiente registro detalla todas las plataformas comerciales de terceros 175 verificadas activamente en la base de datos de auditoría. Cada registro indica el nombre de la entidad, el dominio comercial principal, la ruta de autenticación OpenID observada Steam, la clasificación de la actividad, las correspondencias de incumplimiento contractual (SSA § 2.G, SSA § 4.C, SSA § 1.C) y el campo de acción registrado en el conjunto de datos de origen. La etiqueta «Véase la prueba fechada» remite al lector a los registros justificativos; no establece que Valve no tomara ninguna medida. La ausencia de un campo de acción se indica como «no establecido».

Sección IV: Arquitectura técnica y mecanismos de autenticación REF: ANÁLISIS TÉCNICO -01

**1. Ausencia de validación de la titularidad del dominio en OpenID 2.0:** La implementación de Valve del protocolo OpenID 2.0 (`https://steamcommunity.com/openid/login`) evalúa el `openid.return_to` y `openid.realm` parámetros sin necesidad de que el desarrollador se haya registrado previamente, de realizar una verificación mediante desafío criptográfico ni de validar la titularidad del dominio. Cualquier operador comercial puede redirigir a los usuarios a la pantalla de inicio de sesión de Valve y recibir una afirmación de identidad firmada criptográficamente (que contiene el SteamID de 64-bits) redirigida a dominios arbitrarios.

**2. Consultas programáticas de inventario y uso indebido de claves de «API»:** Una vez confirmada la autenticación del usuario a través de OpenID, los operadores consultan los puntos finales de las webAPIes públicas y de socios (`IEconItems_730/GetPlayerItems`) para indexar los activos de inventario en tiempo real. Las redes de negociación automatizadas utilizan tokens de sesión programáticos para enviar, solicitar y aceptar ofertas de negociación entre pares (P2P), lo que contraviene directamente la prohibición de la interacción no humana establecida en el artículo 4.C de la SSA.

**3. Asimetría del filtro de enlaces:** La coexistencia de advertencias sobre dominios dirigidas a los consumidores junto con puntos finales de autenticación plenamente funcionales genera una contradicción normativa: la telemetría de seguridad de Valve clasifica a estos operadores como «potencialmente maliciosos», mientras que la infraestructura de autenticación de Valve sigue autenticando a su base de usuarios.

Metodología probatoria y declaración sobre la cadena de custodia

Este documento se ha elaborado a partir de capturas de red no autenticadas, consultas históricas al registro RDAP y manifiestos de hash criptográficos verificados. No se han sometido a pruebas de compromiso ni se han procesado credenciales de inicio de sesión de ningún

usuario. Todos los hallazgos reflejan el estado observable de la red de producción a fecha de septiembre de 2026.. El presente documento constituye un anexo técnico imparcial elaborado para consultas judiciales, reguladoras y públicas.
