**DOSSIER** : VAL-REG-2026-09-EVID

**PROVENANCE** : phishdestroy.io/steam\_dossier/

**DROITS** : TOUS LES DROITS CÉDÉS À L'HUMANITÉ

## Loi sur l'audit judiciaire et annexe réglementaire

Mise à disposition systématique d'APIs par des tiers, architecture de contournement automatisée et non-application des clauses contractuelles au sein de l'écosystème « Valve » (Steam)

Domaine d'émission **phishdestroy.io**

Plateforme cible **Valve Steam / Steamworks**

Vecteur d'authentification principal **Steam OpenID 2.0 / Site web API**

Mention légale **All Rights to Humanity (CC0)**

Section I : Note de service de la direction et constatations factuelles RÉF. : MEMO-SUMMARY-01

Le présent document constitue un rapport d'audit judiciaire officiel examinant les recoupements opérationnels entre les conditions commerciales publiées par la société « Valve », ses points d'authentification techniques et les plateformes commerciales tierces observées. L'audit a été réalisé à l'aide d'une observation passive et non authentifiée du réseau, d'une vérification des enregistrements de IRDAP, ainsi que des données télémétriques publiques de Link Filter.

**Essence factuelle** : Des observations empiriques mettent en évidence une divergence systématique entre les déclarations contractuelles publiques d'Valve et son infrastructure de production. Alors que le contrat d'abonnement d'Steam (SSA) interdit strictement l'exploitation commerciale non autorisée (§ 2.G), les interactions automatisées par des bots ou des scripts (§ 4.C) et le transfert de comptes (§ 1.C), la société Valve continue de fournir une infrastructure programmatique en temps réel d'authentification OpenID et de consultation d'inventaire à au moins 175 entités commerciales générant des volumes de transactions secondaires de plusieurs milliards de dollars.

Articles non appliqués de la loi SSA : § 2.G / § 4.C

0

Révocations d'authentification imposées  
Cadre contractuel et réglementaire applicable  
SSA § 2.G

**Interdiction d'utilisation à des fins commerciales :** Il est formellement interdit d'exploiter le Contenu et les Services à des fins commerciales sans l'autorisation écrite préalable de la société « Valve ».

SSA § 4.C

**Restriction relative à l'automatisation :** Il est strictement interdit d'utiliser des scripts, des robots de trading, des macros ou tout autre système non contrôlé par un être humain pour interagir avec les services et les marchés d'Steam.

SSA § 1.C

**Obligation d'utilisation à des fins personnelles :** Limite l'utilisation des comptes à un usage personnel ; interdit expressément la vente, la location, le transfert ou l'échange de comptes d'utilisateurs d'Steam.

Loi européenne sur les services numériques (DSA) 2022/2065

**Évaluation des risques systémiques (art. 34/35) :** Les très grandes plateformes en ligne (VLDP) doivent détecter, évaluer et atténuer activement les risques systémiques découlant d'une utilisation abusive automatisée et d'une exploitation commerciale non autorisée.

Section II : Registre des pièces A — Paires de filtrage de liens documentées (itinéraires « 26 »)  
RÉF. : EX-SPLIT-LEDGER

**Analyse médico-légale des techniques d'évasion par division de domaine :** Dans le cadre du système de filtrage de liens « Steam » d'Valve ([steamcommunity.com/linkfilter/?url=...](https://steamcommunity.com/linkfilter/?url=...)), lorsqu'un utilisateur final clique sur un lien menant à une plateforme de jeux d'argent ou de marché noir signalée, Valve affiche un avertissement bien visible (« *Lien bloqué ! ... signalé comme potentiellement malveillant* »). Toutefois, l'analyse judiciaire des chemins de transmission révèle que des plateformes commerciales 26 opèrent sur un **architecture à domaines séparés**: alors que le domaine commercial principal est BLOQUÉ par le filtre de liens, le domaine secondaire hébergeant le point de terminaison de retour OpenID de Valve est marqué comme « CLEAN ». Les serveurs OpenID de Valve acceptent sans interruption les demandes d'authentification provenant de ces hôtes proxy, ce qui neutralise l'avertissement de sécurité destiné aux utilisateurs tout en continuant à traiter les connexions.

Les corps bruts des réponses HTTP et les hachages SHA-256s ont été conservés dans le jeu de données du référentiel (steam\_tos\_assets/linkfilter-2026-09-22.json).

### Section III : Registre des pièces justificatives B — Recensement exhaustif des entités commerciales auditées d'175 RÉF. : EX-175-MASTER-CENSUS

Le registre ci-dessous répertorie toutes les plateformes commerciales tierces 175 activement vérifiées dans la base de données d'audit. Chaque enregistrement indique le nom de l'entité, le domaine commercial principal, l'URL d'authentification OpenID observée Steam, la classification de l'activité, les correspondances de violation contractuelle (SSA § 2.G, SSA § 4.C, SSA § 1.C) et le champ « action » enregistré dans l'ensemble de données source. La mention « Voir les preuves datées » renvoie le lecteur aux documents justificatifs ; elle n'établit pas que l'Valven'a pris aucune mesure. L'absence de champ « action » est signalée comme non établie.

Section IV : Architecture technique et mécanismes d'authentification RÉF. : TECH-ANALYSIS-01

**1. Absence de validation de la propriété du domaine dans OpenID 2.0:** Implémentation par Valve du protocole OpenID 2.0 (<https://steamcommunity.com/openid/login>) évalue le `openid.return_to` et `openid.realm` paramètres sans exiger d'inscription préalable des développeurs, de vérification par défi cryptographique ni de validation de la propriété du domaine. Tout opérateur commercial peut rediriger les utilisateurs vers la page de connexion de Valve et recevoir une attestation d'identité signée cryptographiquement (contenant le SteamID à 64-bits) redirigée vers des domaines arbitraires.

**2. Abus liés à la consultation et à l'APIation programmatiques de l'inventaire :** Une fois l'authentification de l'utilisateur confirmée via OpenID, les opérateurs interrogent les points de terminaison des sites Web publics et des APIs partenaires (`IEconItems_730/GetPlayerItems`) afin d'indexer les actifs en stock en temps réel. Les réseaux de négociation automatisés utilisent des jetons de session programmatiques pour soumettre, interroger et accepter des offres de négociation entre pairs (P2P), ce qui contrevient directement à l'interdiction d'interaction non humaine prévue par l'article 4.C de la SSA.

**3. Asymétrie du filtre de liens :** La coexistence d'alertes relatives à des domaines destinés aux consommateurs et de points de terminaison d'authentification pleinement opérationnels crée une contradiction réglementaire : la télémétrie de sécurité de Valve classe ces opérateurs comme « potentiellement malveillants », alors que l'infrastructure d'authentification de Valve continue d'authentifier leur base d'utilisateurs.

Méthodologie en matière de preuve et déclaration relative à la chaîne de conservation des preuves

Le présent document a été établi à partir de captures réseau non authentifiées, de l'historique des requêtes du registre « RDAP » et de manifestes de hachage cryptographique vérifiés. Aucun identifiant de connexion d'utilisateur n'a fait l'objet d'un test de compromission ni n'a été traité. Tous les résultats reflètent l'état observable du réseau de production au 2026.. Le présent document constitue une pièce à conviction technique impartiale, préparée à l'intention des instances judiciaires, réglementaires et du public.
